

### DESCRIPTION

The LXOM-AT consists of a TTL and CMOS-compatible hybrid circuit and a miniature quartz crystal packaged in a hermetically-sealed metal DIP. Permanent, precision tuning and a hermetically sealed AT quartz crystal allows for very tight calibration tolerance and eliminates the need for a tuning capacitor, a major source of long-term frequency drift.

### FEATURES

- Low aging
- CMOS and TTL compatible
- Double hermetically sealed package
- Full military testing available
- 3 Volt operation also available
- Optional Tri-State or Output Enable

### APPLICATIONS

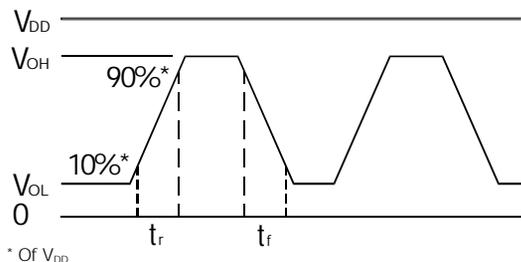

Industrial, Computer & Communications

- General purpose clock oscillator

## ABSOLUTE MAXIMUM RATINGS

Supply Voltage $V_{DD}$	-0.3V to 7V
Storage Temperature	-55°C to +125°C

## TRUTH TABLE

	PIN 1*	PIN 5
LXOM-AT-8E	Low (0)	High (1)
	High (1)	Freq. Output
LXOM-AT-2E	Low (0)	Low (0)
	High (1)	Freq. Output
LXOM-AT-10T	Low (0)	High (Z)
	High (1)	Freq. Output

\* Normally high (internal pull-up resistor)

## ENABLE VS. TRI-STATE

Enable: When pin 1 is low (0), the oscillator stops oscillation.

Tri-state: When pin 1 is low, the oscillator is running. However, the output buffer amplifier stops functioning and output is in high impedance (Z) state.

	Enable	Tri-state
Current consumption when pin 1 is low	Low	High
Output recovery delay when pin 1 changes from low (0) to high (1)	Delayed	Immediate
