# WATER COOLED HEAT EXCHANGER UNITS FOR MEDICAL AND INDUSTRIAL SYSTEMS

The WL500 is a re-circulating liquid to air heat exchanger that offers dependable, compact performance by removing large amounts of heat from a liquid circuit. The coolant is re-circulated using a high pressure pump to assure maximum flow rate. Heat from coolant is absorbed by a radiant heat exchanger and dissipated into the ambient environment using brand name fan. Manual adjustments can be made to control flow switch. Customized features are available, however, MOQ applies.

### **NOTES**

- 1. Check coolant level regularly. For optimal cooling performance, coolant level should always be above MIN fill level.
- 2. Hose selection should be of material and thickness to support pressure resistance and coolant type.
- 3. Wall mountable. Four mounting holes are available to accommodate S6 fixings and 5  $\times$  40 mm machine screws.
- 4. Multiple cord plug options available to accommodate regional socket outlet requirements. Consult with Laird Technologies on cord plug selection.
